

## Application Instructions

---

Dear Applicant,

Thank you for your interest in joining MEDIC Foundation!

Please read through the details of the teams and positions that are available.

In order to complete your application:

1. Fill out the application form:  
<https://forms.gle/Be5e5qsAvkTVy7ok8>
2. Email your resume to  
***contact.teammedic@gmail.com***
3. Name the subject line of the email as "MEDIC Application - [Full name and position title]"

If you have any further questions regarding the recruitment, please contact us via email!

# MEDIC FOUNDATION

---

### **Mission:**

Our mission is to research and innovate solutions for patients diagnosed with chronic diseases. We want to make a positive difference in the lives of individuals affected by such diseases and provide industry-leading solutions.

### **Vision**

We aim to revolutionize the way people approach chronic disease. Be it through advocacy and innovation, we want to make the world a better place for those affected by them.

# CROHN'S & IBD RESEARCH TEAM

---

MEDIC's new research project is targeted towards creating medical solutions for a chronic disease called Crohn's Disease aka IBD (Inflammatory Bowel Disease). We aim to create a commercializable medical device to assist patients diagnosed with Crohn's Disease to take back control of their lives and maintain a higher quality of life. We will be following the engineering design process to plan, build and verify our prototype to show to potential partners/advisors, regulatory boards, and stakeholders. We will be documenting our design process and procedures in a document called the Design History File (DHF). All actions and reviews must be documented in said DHF as they pertain to standards imposed by regulatory boards (FDA, EC, CAMDCAS) under ISO 13485 or 9001. This team also plans to create an environment that fosters learning outside the classroom and to bring awareness to those suffering from chronic conditions. For more information regarding our project and MEDIC, visit [www.medicfoundation.org](http://www.medicfoundation.org)

## RESEARCH ASSOCIATE

---

In this role, you will collaborate closely with other members to assist with the design process and translate research into actionable specifications for medical device development. Your knowledge of biology and experience in research will play a significant role during the formation of design considerations and specifications for this project. The role of a research associate provides a valuable learning opportunity to develop research skills, technical expertise, problem-solving abilities, collaboration and communication skills, project management capabilities, and an understanding of ethical considerations in medical device research. All team members will receive technical training before detailed design to help with task completion.

### Skills and requirements:

- Experienced In Literacy Research
- Knowledge of the Gastrointestinal system and chronic conditions that affect the bowel is an asset
- Experienced in writing technical reports
- Proficient in verbal and written communication
- Excellent Problem-solving abilities and attention to detail
- Assist the team with other project tasks as required
- Be passionate about learning and helping! Dedicated members are highly valued in coordinating the project as a team.
